

Easing the transition to EHRs

The deadline for adopting EHRs looms, but here's the reality: Paper will continue to be part of the system for years to come. And providers of all sizes need to move to fully electronic records without affecting patient care, doctors or business processes.

For many, the problem isn't the new technology; it's how to move forward without being weighed down by existing paper records. Providers can't be expected to consult both a paper and an electronic chart at every patient encounter. Yet scanning reams of paper can be a drain on time and resources that are already scarce and should be focused on patient care.

And unless you have a way to automatically sort, identify and match documents to a patient's EHR, you'll be faced with a lot of unnecessary rework and a greater likelihood of error.

Let ABBYY FlexiCapture solve your paper problem

ABBYY FlexiCapture® not only lets you scan patient records, it also extracts the data needed to automatically associate them with the right EHRs. It can "read" the information in a patient record, such as an MRN, date of birth, patient name, etc. Validation rules, automated classification and other features ensure that the scanned charts – and the documents within them – are accurately identified. The result: faster conversion of your paper records with fewer resources.

ABBYY FlexiCapture improves patient care

Take the data. Leave the paper. ABBYY FlexiCapture offers a standalone solution for up to 300,000 pages per year and a distributed solution for larger volumes. Either way, it's the perfect solution for capturing the data you need from paper medical records. And an ideal way to help ensure that staff can spend more time helping patients and less time dealing with paper.

"The extra overhead associated with manual data entry makes ABBYY FlexiCapture an outstanding value."

—Chelsea Sprague,
On-Site Anesthesia Services, Inc.

Features

With FlexiCapture, you can:

- Eliminate the inconvenience and potential liability of maintaining duplicate/hybrid records
- Reduce the impact of converting paper charts by practically eliminating manual data entry
- Comply with HITECH deadlines as well as the spirit of the Meaningful Use requirements
- Accommodate the flow of paper documents (e.g., lab reports, referrals, faxes, etc.) that will continue to be a part of patient care
- Spend less time looking for paper and more time helping patients

This powerful solution is easy to use and makes short work of processing everything from intake forms to post-op summaries. Best of all, intelligence within the software learns to recognize different types of documents automatically.

Prepare for tomorrow's challenges today

HITECH, healthcare reform, the growing pool of retiring Baby Boomers – healthcare providers face increasing challenges to maintain standards of excellent, affordable care. But they cannot expect more funding. That's why ABBYY FlexiCapture can make an important difference in your transfer to EHRs. It can help you make the switch to EHRs easily and affordably, while preserving patient care standards.

To find out how ABBYY FlexiCapture can eliminate your current paper backlog and easily capture the paper records you receive in the future, visit abbyy.com or call 866-463-7689.

System Requirements

- PC with 2 GHz or higher processor
- Operating system: Windows Server 2003 SP2, Windows Server 2008 SP2, Windows Server 2008R2 SP1, Windows Server 2012
- Memory: no less than 2 GB and additional 4 GB for the database
- Hard disk space: 100 MB for installation, 2 GB for the database
- Internet Information Services 6, 7 or 7.5
- Microsoft .NET Framework 3.5 SP1
- Microsoft SQL Server 2005 SP2, 2008 SP1, 2008R2 SP1, or 2012; Oracle 10g or 11g

Note: System requirements may vary based on the type of the station or server component. Refer to the product documentation for further details.
